

# Wet polishing system STP

Comprising an NPM 125 wet polishing machine (in a systainer)  
and a wet vacuum cleaner with fitted tank

www.frueh-maschinen.de

- No splashing
- Grinding results immediately visible
- The operator has only one machine to deal with (cleaner + piggy-back tank). All connecting parts such as water supply, electric cable and extractor hose are bound together.

### The appeal of this solution lies in its simplicity:

The easy-to-handle wet vacuum cleaner carries the 15 litre tank piggy-back and is equipped with a socket to which the NPM 125 hand-held polishing machine can be connected.

The tank is locked into place over the handle on top of the cleaner and is

thus pulled along behind the grinding machine. Due to the tank's position high up on top of the cleaner, water can be supplied through the hose without the use of pressure.

The connected vacuum cleaner extracts the grime created by the NPM 125 immediately. The dust extraction hood is well-sealed thanks to the brush ring which is adjustable in height. As a result it is not necessary to mask walls (splash protection).

The NPM 125 hand-held polishing machine is supplied in a systainer, and is also available without the vacuum cleaner. At 1200 Watt its power is convincing and the machine can be equipped with either a Velcro covered base plate for resin bonded diamond Velcro polishing discs (available in 30 - 10000 mesh) or with diamond cup wheels Ø 125 mm.

### Technical data

Vacuum cleaner		NPM 125	
Motor	Bypass motor	Motor	universal motor
Voltage	230V / 50Hz	Voltage	230V / 50Hz ac current
Power	1200 Watt	Power	1200 Watt
Suction power	353 Watt	Speed	900 - 2500 rpm
Max. air flow	60 l/sec	Weight	5 kg
Capacity	25 l	Tool	Ø125 mm
Height	79 cm		
Weight	12 kg
